

FRD 1 — Indian IT & Legal Advisor + Advocate Connect Platform

1. Project Overview

Project Name: Indian Legal Advisor Bot & Advocate Connect

Purpose:

An AI-powered legal-information platform designed for **Indian consumers, IT professionals, startups, businesses, and organizations.**

The platform provides:

- AI-based legal information
- Indian law document guidance
- Agreement/form assistance
- Compliance information
- Legal-document explanations
- Advocate discovery
- On-demand advocate consultation
- Affidavit/document assistance through advocates
- Organization-specific legal-policy assistance

The platform will use **RAG over verified Indian legal sources** rather than relying solely on an LLM's internal knowledge.

2. Core Product Model

The platform will have **two access tiers.**

Tier 1 — Consumer / Public

A limited version of the AI bot can be accessed by anyone.

Users can ask questions such as:

"What is an affidavit?"

"What documents are generally required for an affidavit?"

"What is the difference between an agreement and a contract?"

"What information is normally included in a rental agreement?"

"What are the basic requirements for an employment agreement?"

"What is the process for registering a company in India?"

The bot provides **general legal information and document guidance.**

Tier 2 — Professional / Advocate Services

For matters requiring professional legal assistance, the system connects the user with an advocate.

Examples:

- Affidavit preparation
- Agreement drafting/review
- Contract review
- Legal notices
- Property documentation
- Employment disputes
- Business disputes
- Litigation-related matters
- Compliance consultation

The AI should transition the user from:

Information → Professional assistance

rather than pretending to be the advocate.

3. Indian Legal Knowledge Base

The RAG knowledge base should prioritize authoritative Indian sources.

Primary sources

- Constitution of India
- Acts of Parliament
- Central Government legislation
- India Code
- Gazette notifications
- Supreme Court judgments
- High Court judgments
- Government regulatory frameworks
- Ministry notifications
- Regulatory authority publications

IT / Technology Law

Important areas include:

- Information Technology Act, 2000
- Digital Personal Data Protection Act, 2023
- Information Technology Rules
- Cybersecurity requirements
- Electronic records
- Electronic signatures
- Digital contracts
- Data protection
- Intermediary obligations
- Cybercrime-related provisions
- Intellectual property relating to software

Business / Corporate

- Companies Act, 2013
- Contract law
- Sale of Goods law
- Consumer protection
- Partnership/LLP regulations
- Labour/employment laws
- Tax-related information where appropriate
- Startup/business compliance

Intellectual Property

- Copyright Act
- Patents Act
- Trade Marks Act
- Designs Act
- GI-related legislation

4. User Journey

User

|

5. Functional Requirements

FR-01 — Public Legal Chat

Unauthenticated or registered users can access a limited legal-information chatbot.

The bot shall:

- Accept natural-language queries.
- Identify the legal domain.
- Identify potential jurisdiction.
- Retrieve relevant Indian legal sources.
- Generate a grounded response.

- Display sources.
- Provide appropriate disclaimers.

6. Legal Query Classification

Every question should be classified.

CONSUMER_LAW

CONTRACT_LAW

IT_LAW

CYBER_LAW

DATA_PROTECTION

IP_LAW

PROPERTY_LAW

EMPLOYMENT_LAW

CORPORATE_LAW

FAMILY_LAW

CRIMINAL_LAW

TAX_LAW

DOCUMENT_GUIDANCE

ADVOCATE_REQUIRED

OUT_OF_SCOPE

This makes the platform expandable beyond IT law while retaining a strong IT/legal specialization.

7. Document Assistant

One of the strongest consumer-facing features should be a **Legal Document Assistant**.

User selects:

What do you need?

☐ Rental Agreement

☐ Employment Agreement

☐ NDA

- ☐ Affidavit
- ☐ Declaration
- ☐ Business Agreement
- ☐ Partnership-related document
- ☐ Authorization Letter
- ☐ Legal Notice
- ☐ Other

The system then asks structured questions.

Example:

Document: Affidavit

Purpose:

Name:

Address:

Jurisdiction:

Facts to declare:

Supporting documents:

The AI can explain:

- What information is normally required.
- What clauses/sections are commonly present.
- What supporting documents may be relevant.
- What professional verification may be required.

For documents requiring legal execution, notarization, stamping, registration, or professional review, the system should clearly indicate that requirements can vary by **state, document type, and circumstances**.

8. Advocate Connect

The user can click:

"Talk to an Advocate"

The platform displays advocates based on:

- Practice area
- State

- City
- Language
- Availability
- Consultation type
- Experience
- User ratings/reviews, where supported
- Consultation fee

Example:

LEGAL REQUIREMENT

Affidavit assistance

[Find an Advocate]

Available:

- ✓ Advocate A
- ✓ Advocate B
- ✓ Advocate C

9. On-Demand Legal Assistance

The platform should support:

Consultation

15 min

30 min

60 min

Document services

Draft

Review

Modification

Affidavit assistance

Agreement review

Communication

Depending on the platform architecture:

- In-app chat
 - Voice consultation
 - Video consultation
 - Appointment scheduling
-

10. Advocate Dashboard

Advocates should have a separate portal.

Dashboard

New Requests

Pending Consultations

Upcoming Appointments

Documents

Earnings

Client Messages

Request example

Client:

Anonymous/verified identity

Matter:

Rental Agreement

Requirement:

Review existing agreement

Preferred language:

English

Consultation:

30 minutes

The advocate can:

- Accept/reject request.
 - Chat with client.
 - Schedule consultation.
 - Request documents.
 - Upload final documents.
 - Close the matter.
-

11. RAG Architecture

User Query

Legal Domain Classifier

Indian Jurisdiction Detection

Query Rewriting

Hybrid Search

Reranker

Verified Indian Sources

LLM

Legal Guardrails

12. State/Jurisdiction Intelligence

This is important for India.

The system should determine whether the question potentially depends on:

- Central law
- State law
- Local rules
- District-level procedures
- Court jurisdiction
- Registration authority
- Stamp-duty rules

Example:

"How much stamp duty is required?"

The bot should **not blindly provide one national figure**.

It should ask:

"Which Indian state and document type are involved?"

13. Legal Risk Engine

Queries should receive an internal risk classification:

LOW

MEDIUM

HIGH

CRITICAL

Low

General legal education.

Medium

Document guidance.

High

Specific dispute or significant legal consequences.

Critical

Active litigation, criminal matters, regulatory action, major financial exposure, etc.

High-risk matters trigger:

"This matter may require advice from a qualified advocate."

14. Mandatory Disclaimer

The public chatbot should clearly state:

This AI provides general legal information and document guidance based on available legal sources. It does not constitute legal advice, does not establish an advocate-client relationship, and should not replace advice from a qualified legal professional. Laws and procedures may vary by jurisdiction and circumstances.

15. Recommended Technology

Layer	Technology
Frontend	Next.js
Backend	FastAPI
RAG	LlamaIndex / LangChain
LLM	GPT / Claude
Vector DB	PostgreSQL + pgvector
Search	Elasticsearch/OpenSearch
Database	PostgreSQL
Document processing	PyMuPDF / Unstructured
Authentication	OAuth/OIDC
Payments	Indian payment gateway
Advocate video	WebRTC
Deployment	Docker/Kubernetes

16. Revenue Model

The platform can support:

Free

Limited AI queries.

Premium

Higher query limits + document assistant.

Legal Services

Commission/service fee from consultations or document services, subject to the applicable professional and regulatory framework.

Enterprise

Organizations pay for:

- IT legal knowledge base
- Compliance assistant
- Internal policy RAG
- Employee legal-information portal
